RYAN W. WUCKERT

Media Ingest & Automation Architect · Digital Asset Management · Zero-Trust AI Infrastructure

Winnipeg, MB, Canada (Remote — Global) · ryanwuckert@gmail.com · +1 204-962-0369 github.com/moviecolor · linkedin.com/in/ryan-w-wuckert-58121034 · imdb.com/name/nm2344474

SUMMARY

Media ingest and automation architect with 17 years of zero-fault data handling on major motion picture and episodic productions for Universal, Netflix, Sony, Amazon MGM, and Lionsgate. I design high-throughput ingestion pipelines, algorithmic verification workflows, and petabyte-scale digital asset management operations — and I extend that discipline into secure, air-gapped AI infrastructure for enterprise media teams.

I build systems where a checksum mismatch is not a bug report, it is a production shutdown. That is the standard I bring to enterprise media operations.

CORE CAPABILITIES

Media Operations & DAM/MAM High-throughput data ingestion · 3-2-1 storage architecture · disaster recovery design · petabyte-scale digital asset lifecycle management · metadata taxonomy and schema design · SLA-driven quality control · chain-of-custody documentation · delivery specification compliance

Data Integrity & Verification Algorithmic file verification (MD5, XXHash) · checksum-validated transfer workflows · audit-ready reporting · insurance-grade data integrity compliance · multi-destination redundancy · verified restore procedures

Zero-Trust AI Infrastructure Air-gapped inference architecture · offline model deployment · zero-telemetry data governance · NDA-compliant local processing · no-egress pipeline design · local GPU orchestration (RTX 5090, 32 GB) · workload isolation

Automation & Engineering Python · Flask · Node.js / Express · Docker · REST APIs · LAN networking · workflow orchestration · custom tooling development · AppleScript / Mac Automator · SwiftUI / SwiftData (native iOS deployment) · Git / GitHub

Post & Color Systems DaVinci Resolve · Pomfort LiveGrade · ARRI Look Creator · LUT and color pipeline management · dailies and review workflows · broadcast QC · ARRI RAW, RED, Sony, Panavision formats

AI Workflow Automation ComfyUI pipeline architecture · multi-modal processing (image, video, audio) · identity-consistent asset generation · LoRA training · local inference optimization and VRAM management · model evaluation and integration

EXPERIENCE

AI & Automation Specialist — Movie Color | Remote / B2B | 2024 – Present

- Design and deliver **fully air-gapped, zero-telemetry media automation pipelines** for studios and creators under strict NDA — no cloud inference, no external data egress, no third-party exposure of client assets.
- Obtained **written commercial authorization from MiniMax** for local, air-gapped deployment of the MiniMax H3 model family (entity: Movie Color) under the US$20M Community License threshold — a documented compliance artifact for client legal review.
- Built multi-modal local pipelines spanning image, video, and audio processing, including identity-consistent asset generation and custom model training.
- Developed and shipped internal production tooling: **ReMyk** (LAN-relayed remote voice capture server; Flask, Whisper, Web Audio API, ~2-second round trip, zero-install browser client), the **DIT UnGRADE Tool** (Python; reverses on-set LUT grades back to camera LOG; LUT support for Alexa Classic, Alexa 35, Sony Venice), and **Langly** (native iOS deployment, App Store approved, SwiftUI / SwiftData).

Media Ingest & AI Pipeline — *Acting Good*, CTV / CW | Urban Post | 2025

- Ingested raw cinema camera assets (ARRI RAW) from principal photography and pulled high-fidelity reference stills for a localized, audio-driven AI animation workflow that produced **four distinct spoken-line deliverables**.
- Delivered finished assets that passed **network color grading, editorial review, and broadcast compliance** to air on CTV/CW and streaming — a broadcast-tested AI pipeline, not a proof of concept.
- Simultaneously served as **Digital Imaging Technician** on seasons 1, 3, and 4 of the series (Alexa Mini LF).

Video Producer — Self-Employed | Remote | 2023 – Present

- Produced AI-generated augmented footage for **Amazon Prime/CTV**.
- Delivered **20+ product-consistent asset variants** from a single source set, with 100% subject consistency across every variation — a controlled-variance asset pipeline later validated at 3.2x higher retention.

Content Developer / Camera Operator / Colorist — Lucky 9 Productions Inc | 2015 – Present

- End-to-end media production and post for agency and corporate clients: ingest, asset management, color correction, and delivery.
- Resident digital signage specialist — automated content distribution to networked display systems.

Digital Imaging Technician — IATSE Local 669 & Local 667 | 2010 – Present

- **17 years of on-set data integrity ownership**: ingested, verified, and delivered camera original data for features and episodic series under production-critical deadlines.
- Operated algorithmic verification (MD5 checksum) workflows across multi-destination backup architectures (RAID, LTO, NVMe shuttle) with documented chain-of-custody for every asset.
- Managed metadata capture, taxonomy, and reporting across ARRI, RED, Sony, Panavision, and Phantom formats.
- Provided closed-network review and color-managed dailies to directors, DPs, and studio stakeholders.
- Credits include *The Long Walk* (Lionsgate), *Violent Night* and *Nobody* (Universal), *The Ice Road* (Universal), *Tales from the Loop* (Amazon), *The Grudge* (Sony), *Fracture* (Netflix), *Holiday Shift* (CBS/Roku), and *Spencer Sisters* (eOne/CTV/CW).

SELECTED PRODUCTION CREDITS

The Long Walk (Lionsgate, 2025) · *Acting Good* (CTV/CW, 2025 — ingest, AI pipeline, DIT) · *Holiday Shift* (CBS/Roku, 2023) · *Spencer Sisters* (eOne/CTV/CW, 2022) · *Violent Night* (Universal, 2022) · *Nobody* (Universal, 2022) · *The Ice Road* (Universal, 2021) · *Tales from the Loop* (Amazon, 2020) · *The Grudge* (Sony, 2020) · *Fracture* (Netflix, 2019)

CERTIFICATIONS

- **Generative AI: Elevate your Software Development Career** — IBM — Jun 2026 — Credential H7VMGO0Y0IPL
- **Prompt Engineering for ChatGPT** — Vanderbilt University — Jun 2026 — Credential 5JWAUJ7OEH5S
- **Introduction to Generative AI for Software Development** — DeepLearning.AI — Jun 2026 — Credential BP0DGC6M9PJ9
- **Google AI Fundamentals** — Google / Coursera — Jun 2026
- **IBM — Generative AI** — Agentic workflows, software architecture, DevSecOps, application security, data ethics, LLM applications
- **DIT Training** — Sim Video (2010) · **RED Post Production** — PS Prairies (2010) · **Data Management Technician** — PS Prairies (2010) · **Phantom Capture** — Sim Video (2011)

EDUCATION

University of Manitoba — 4-Year Advanced Bachelor of Anthropology (Forensic, Physical, Cultural); Minor: Film Studies — 1992–1997 **Vanderbilt University** — Prompt Engineering / Computer Science — Jun 2026 (Grade: 99)

ENGAGEMENT

Remote contract and consulting engagements worldwide. Air-gapped deployment, NDA-compliant, invoiced as work-for-hire.
